SUMMARY

Software engineer passionate about building Full-Stack, responsive, scalable, and user-friendly applications. Experienced in Python, JavaScript, and web development, with growing expertise in cloud platforms and AI-powered developer tools. Skilled in problem-solving, collaboration, and contributing to innovative projects.

EDUCATIONAL BACKGROUND

African Leadership University – Kigali, Rwanda **January 2025 – Present**

BSE, Software Engineering

Relevant Coursework: Python, Linux and IT tools, Front-end development, Responsible enterprise, Web development, Mobile app development, Machine learning, ...

ALX – Kigali, Rwanda **August 2024 – October 2024**

Certificate, Professional foundations

Relevant Coursework: leading(self and others), communication for impact, quantitative reasoning, entrepreneurial thinking, critical thinking, managing complex tasks, and tech foundations.

AI Saturdays – Kigali, Rwanda **June 2025 – September 2025**

Certificate, Introduction to AI

Relevant Coursework: Linear Algebra, Statistics & Probability, Python Programming, NumPy & Pandas, Machine Learning Fundamentals, Linear & Logistic Regression, Feature Engineering, Regularization, TensorFlow, Model Evaluation & Generalization.

ALU Competitive programming – Kigali, Rwanda **February 2026 – Present**

International Collegiate Programming Contest

Relevant Coursework: Data Structures and Algorithms, Advanced Programming (C++), Analysis of Algorithms, Discrete Mathematics, Graph Theory, Object-Oriented Design, Number Theory, Combinatorial Optimization, Computational Geometry, and Operating Systems.

PROFESSIONAL WORK EXPERIENCE

Fullstack Engineer intern, **May 2026 – July 2026**

ThinkGreen AFrika– Kigali, Rwanda

- Maintained and enhanced a deployed recruitment platform by integrating frontend and backend systems, improving application reliability and user experience.
- Developed and integrated RESTful APIs, resolved system integration issues, and supported testing and deployment of new features.
- Collaborated with cross-functional teams using Agile methodologies to deliver platform improvements and maintain development workflows.
- Contributed to optimizing candidate application and employer recruitment processes through full-stack development.

Eco Innovation Lab Manager, **July 2025 – Present**

Planet Vanguard – Kigali, Rwanda

- Built and maintained digital tracking systems (Google Sheets + structured databases) to monitor Eco-Innovation Lab projects, improving visibility of project progress and reducing reporting delays by ~15%.
- Coordinated technical execution of youth-led innovation projects, including prototype development workflows, improving delivery consistency across 3–5 concurrent projects per cycle.
- Collaborated with technical mentors to guide teams on problem decomposition, system design thinking, and iterative development practices (Agile-style workflows).

Research manager, **January 2025 - July 2025**

Planet Vanguard – Kigali, Rwanda

- Built structured digital research systems using Google Forms and Sheets, improving data organization and reducing duplication errors by ~10%.
- Conducted mixed-method data collection (surveys, interviews, field notes) and converted raw data into structured datasets for analysis of 10+ indigenous conservation case studies.
- Performed basic data cleaning and categorization in spreadsheets to identify patterns in environmental practices across communities.
- Translated qualitative insights into structured outputs that informed system design for Eco-Innovation Lab initiatives.
- Collaborated with program and technical teams to transform research findings into prototype-ready problem statements for software and innovation projects.

PROJECTS

Team Project – Farmer Konekt (African Leadership University) **February 2026 – April 2026**

- Designed and implemented the system architecture for a full-stack agricultural marketplace platform, defining interactions between frontend, backend, and database layers to ensure scalability and maintainability. With the use of draw.io for diagrams like architecture and Unified Modeling Langauge(UML) diagrams.
- Developed the user interface with HTML, CSS, and JavaScript, focusing on responsive design and intuitive user experience for farmers and buyers with a mobile-first design strategy, then other devices come after.
- Collaborated using GitHub (branching, pull requests, code reviews) and managed tasks with Trello in an agile Scrum workflow.
- Contributed to reducing post-harvest losses by improving direct market access between farmers and buyers.

Team Project – NYC taxi(African Leadership University) **Janaury 2026 – February 2026**

- Designed and implemented system architecture for a full-stack transport analytics platform, structuring interactions between frontend, backend, and database layers.
- Collaborated on database design and relationships using **draw.io**, ensuring efficient data modeling and clarity in system design.
- Deployed the application on **Amazon Web Services** with a custom domain (*nyc-ineza.tech*), configuring **Nginx** for server management and routing.
- Built data-driven features to help users choose taxis based on time, price, and location using real **NYC taxi datasets**, improving decision-making efficiency.

Book vault project(African Leadership University) **January 2026 – February 2026**

- Developed a web application for readers to log books, add descriptions, and track reading progress toward personalized page goals.
- Implemented core CRUD functionality for managing book entries and progress tracking, ensuring smooth user interaction and data persistence.
- Designed a simple and intuitive user interface to enhance readability, tracking, and improve user engagement.

Permit Watch(CodeExtreme) **January 2026 – February 2026**

- Developed a web application with React.js for government institutions to monitor and analyze corruption and injustice in building permit processes in Rwanda.
- Built a data visualization system to identify high-risk locations and support decision-making.
- Designed system architecture and UML diagrams defining system structure and workflows.
- Contributed to a platform aimed at improving transparency and reducing corruption in permit issuance processes.

EXTRACURRICULAR ACTIVITIES

Volunteer, Government of Rwanda **October 2023 – December 2023**

- Participated in the **Urugerero program**, a Government of Rwanda initiative, supporting community development through hands-on service.

- Contributed to the construction of a house for vulnerable families, improving safe and stable living conditions.
- Engaged in community education activities by teaching hygiene practices to promote better health and well-being.

SKILLS

- Programming(JavaScript, Python, Node.js, shell, SQL, C++, C)
- Version control(git, github)
- framework(Flask, React)
- Problem solving
- Emotional intelligence
- Tools/platforms: Linux, VS Code, WebStorm
- Project management
- Conflict resolution

INTERESTS

- ICT innovation
- Wildlife conservation
- Technological growth in Africa

LANGUAGES

- Kinyarwanda - Native
- English - fluent
- French - beginner
